

# Challenge

**Include Selenium (Java) code to test in Desktop Web (Chrome and Firefox) in Single Run.**

An example test and its steps would be:

1. Navigate to "[https://webpass.net/san\\_diego/residential](https://webpass.net/san_diego/residential)".
  2. Click on any of the balloon in map section.
  3. Click on "Sign Up" and complete the form including scheduling appointment.
  4. At the end verify the message "Looking for business sign up? Call our sales team at 1-800-WEBPASS x 2 or email us".
- 
1. Separate the controls from the test (so they could be re-used) using page objects.
  2. Repeat the steps 2, 3 and 4 for two test users using excel.
